

## **Body Mount Chop Instructions 2016+**

1: Start with the factory side body mount.

2: Cut out template and place along front facing edge of the body mount. Transfer end and center marks onto the frame.

3: After transferring your marks onto frame, draw a straight line along the bottom surface of mount from the center mark to edge mark. This will allow the body mount chop filler plate to angle away from your tire.

4: Using filler plate as a guide remove material back to your lower mark line, leaving upper frame material at the corner as to not disturb factory body mount.

5: Tack filler plate onto frame. Make sure it is angled away from tire at the bottom. If there are any lips jutting into wheel well grind them down to match filler plate.

6: Finished weld, prep and paint surface while it's still warm.

Use other Template and repeat for passenger side.

All products built and designed by InSain Fabrication, LLC are intended for off-road use and should be assembled, installed, and used in accordance with InSain Fabrication, LLC recommendations. InSain Fabrication, LLC provides this kit as a template to help you achieve the cleanest most efficient body mount chop possible.
